

001

EAT 4 LIFE MARKETING · INTERNAL · AUGUST 2026

MISSION BRIEF: THE SCORECARD GOES LIVE.

For the Claude Code environment connected to GoHighLevel + Slack. Two tasks: stand up the E4L Client Services sub-account cleanly, then build and wire the Revenue Leak Scorecard funnel inside it.

Companion file required in the working directory: [revenue-leak-scorecard-GHL.html](#) (the complete funnel page — do not rebuild it, deploy it).

Authorized by Chosen. Execute in the NEW sub-account only — see guardrails, section 05.

00 · THE PROMPT — PASTE THIS TO START THE RUN

Paste the block below into Claude Code as the opening instruction. Everything after it in this brief is the spec it should follow.

You are operating in the E4L Client Services GHSL sub-account (the new one, NOT the school). Your mission has two tasks, in order:

TASK 1 - You already have the plan to create the E4L Client Services sub-account. Execute it, then verify the result against section 01 of this brief: naming conventions, pipeline, custom fields, tags, users, and the hard wall between Client Services and the school. Section 01 wins wherever the two plans differ.

TASK 2 - Deploy the Revenue Leak Scorecard funnel per sections 02-04: publish revenue-leak-scorecard-GHSL.html (in this directory) as a funnel page at /scorecard, create the Inbound Webhook workflow, paste the webhook URL into the file's WEBHOOK_URL constant before publishing, map fields, build the follow-up automation with the exact copy in section 03, and wire the Slack lead alert per section 04.

Rules: touch NOTHING in the school sub-account. All client-facing copy uses the tagline "AI Marketing Made Easy" - never "Everybody Eats" (that is student-side only). Never promise results in any copy; leak figures are estimates. When every box in section 06 is checked, post the completion report to Slack and stop.

Work through the brief top to bottom. Ask before deviating.

01 · TASK ONE: THE SUB-ACCOUNT SEPARATION

E4L runs two divisions that must never bleed into each other. The **school** (course, students, "Everybody Eats") stays in its existing sub-account. **E4L Client Services** — the agency — lives in the new sub-account this brief targets. One brand kit, two houses, zero shared plumbing.

VERIFY / CREATE IN THE NEW SUB-ACCOUNT

- Sub-account name: **E4L Client Services**. Confirm it exists and you are operating inside it — check the sub-account name before every destructive action.
- Domain: attach the services domain or a subdomain (e.g. go.[services-domain].com) for funnels. Do NOT reuse the school's funnel domain.
- Users: Chosen (admin), Rozel (admin — ops). **Seller seat**: do NOT create yet — the sales hire isn't finalized. When they join: user role, pipeline + contacts view, no workflow edit. Until then all leads route to Chosen.
- Brand kit only: logo (EFL gold mark), colors (matte black / #FFC200 gold), fonts. Nothing else migrates from the school — no contacts, no workflows, no calendars, no funnels.
- Asset naming: every asset in this sub-account is prefixed **CS-** (CS-Scorecard-Funnel, CS-Lead-Intake, CS-Agency-Pipeline). If it doesn't start with CS-, it doesn't belong here.

PIPELINE: "CS-Agency-Pipeline"

STAGE	ENTERS WHEN
1 · New Lead	Contact created from any source; no scorecard yet
2 · Scorecard Complete	Webhook fires from the scorecard — leak data attached
3 · Discovery Booked	20-minute game plan call on the calendar
4 · Demo / Proposal	Personalized voice-AI demo shown or proposal sent
5 · Closed Won	Signed + first payment — tier tag applied (see tags)
6 · Closed Lost / Nurture	No for now — drops into long-term nurture

CUSTOM FIELDS (contact level)

cs_leak_monthly (number) · cs_leak_annual (number) · cs_grade (text) · cs_recommended_tier (text) · cs_industry (text) · cs_customer_value (number) · cs_monthly_inquiries (number) · cs_database_size (number)

TAGS

cs-scorecard-lead · cs-tier-recover · cs-tier-accelerate · cs-tier-own · cs-client-active · cs-nurture

02 · TASK TWO: DEPLOY THE SCORECARD

The page is already built and tested — **revenue-leak-scorecard-GHL.html** in the working directory. Eight questions, a lead gate before the reveal, and a webhook POST carrying the full lead payload. Your job is deployment and wiring, not redesign.

BUILD ORDER (the webhook URL must exist before the page publishes)

- Create workflow **CS-Scorecard-Intake** → trigger: **Inbound Webhook**. Copy the webhook URL.
- Open **revenue-leak-scorecard-GHL.html** → top of the script block → paste the URL into `const WEBHOOK_URL = ""`. Save.
- Funnels → new funnel **CS-Scorecard-Funnel** → one blank step at path **/scorecard**.
- On the page: single full-width section, padding 0, background #000000. Add one Custom Code element → paste the ENTIRE html file.
- Page SEO: title "The Revenue Leak Scorecard — Eat 4 Life Marketing"; description "Find out how much revenue is leaking out of your business — free 2-minute diagnostic." Favicon: EFL mark.
- Publish. Send one test submission with obviously fake data (name: Test Lead).
- In CS-Scorecard-Intake, use the test payload to map fields → the `cs_*` custom fields from section 01. Payload keys: `first_name`, `email`, `phone`, `industry`, `customer_value`, `monthly_inquiries`, `database_size`, `leak_monthly`, `leak_annual`, `grade`, `recommended_tier`, `source`.

WORKFLOW ACTIONS — in this order

- Create/update contact · apply tag `cs-scorecard-lead` · apply tier tag from `cs_recommended_tier`.
- Add to CS-Agency-Pipeline → stage **Scorecard Complete** · assign owner: **Chosen** (reassign to the seller once hired — single workflow edit).
- Send Email #1 (section 03) immediately.
- Send Slack alert (section 04) immediately.
- Wait 1 day → if no Discovery Booked → send SMS #1 (section 03).
- Wait 3 more days → if still no booking → send Email #2 (section 03), tag `cs-nurture`.

03 · THE FOLLOW-UP COPY — USE EXACTLY THIS

Written in Chosen's voice. Merge fields use GHL syntax; leak values are the cs_* custom fields. Do not add corporate polish. Do not promise results.

EMAIL #1 — instant results email

Subject: Your number: {{contact.cs_leak_monthly}}/mo is walking out the door

{{contact.first_name}} - here's what your scorecard says.

Roughly \${{contact.cs_leak_monthly}} a month is leaking out of your business. Not from bad marketing - from opportunities you already earned that nobody caught. Missed calls. Slow follow-up. A database going cold. No-shows nobody chased.

That's \${{contact.cs_leak_annual}} a year, walking.

The fix isn't more leads. It's a system that catches the ones you have. That's what we build - AI Marketing Made Easy.

Grab 20 minutes with me and I'll walk your numbers with you, show you exactly where it's going, and map which system seals it. If we're not the right fit, I'll tell you straight and you keep the map.

[BOOK MY GAME PLAN CALL - button -> CS calendar link]

- Chosen
Eat 4 Life Marketing

P.S. Your numbers are estimates built from industry benchmarks - the call is where we look at your real ones.

SMS #1 — day 2. only if no booking

{{contact.first_name}} - Chosen from Eat 4 Life. Your scorecard showed ~\${{contact.cs_leak_monthly}}/mo leaking. 20 min and I'll show you where it's going + what seals it: [calendar link]. No pitch-fest, just your numbers.

EMAIL #2 — day 5. only if still no booking

Subject: Still leaking, {{contact.first_name}}

Quick math: since you ran your scorecard 5 days ago, roughly \${{contact.cs_leak_monthly}} more slipped through - divided by six, that's real money this week alone.

No pressure. But the leak doesn't pause while you think about it. The call is 20 minutes and the map is yours either way.

[BOOK THE CALL]

- Chosen

04 · SLACK WIRING

Channel: **#cs-sales-leads** (create it if it doesn't exist; invite Chosen and Rozel — add the seller when they join).
Post via the Slack connection on every scorecard completion:

```
NEW SCORECARD LEAD
Name: {{contact.first_name}} | {{contact.cs_industry}}
Leak: ${{contact.cs_leak_monthly}}/mo (${{contact.cs_leak_annual}}/yr)
Grade: {{contact.cs_grade}} -> Rec: {{contact.cs_recommended_tier}}
Contact: {{contact.email}} | {{contact.phone}}
Owner: Chosen - clock starts now. Speed-to-lead applies to us too.
```

Also post a **daily 8am digest** to **#cs-sales-leads**: count of new scorecard leads, total estimated leak identified, and any lead >\$10K/mo flagged as **PRIORITY**.

05 · GUARDRAILS — NON-NEGOTIABLE

- › **Never touch the school sub-account.** No reads needed, no writes ever. If an action would occur outside E4L Client Services, stop and ask.
- › **Tagline wall:** all client-facing copy says "AI Marketing Made Easy." "Everybody Eats" is student-side only and never appears in this sub-account.
- › **No promised results.** Leak figures are directional estimates — every asset keeps that disclaimer. Benchmarks prove understanding; they are not guarantees.
- › **Don't redesign the page.** The HTML is final and tested. Deployment changes only: webhook URL, calendar links, domain.
- › **Pricing is locked:** Recover \$2,500 + \$1,500/mo · Accelerate \$5,000 + \$2,500/mo · Own \$7,500 + \$3,500/mo · voice AI included in every tier. If any asset needs prices, use these — no improvising.
- › **One test before live.** Nothing goes to a real prospect until section 06 is fully checked.

06 · DEFINITION OF DONE

- Sub-account verified: users, domain, pipeline, custom fields, tags all exist with CS- naming
- Scorecard live at /scorecard on the services domain, black background edge-to-edge, mobile checked
- Webhook URL pasted into the file BEFORE publish; test submission created a contact with all cs_* fields populated
- Test contact landed in CS-Agency-Pipeline → Scorecard Complete → assigned to Chosen
- Email #1 delivered to test inbox with merge fields rendering (no blank \${} values)
- Slack alert posted to #cs-sales-leads with correct numbers
- Day-2 SMS and day-5 email verified in workflow preview (do not wait 5 real days — use test-mode)
- Test contact deleted · completion report posted to Slack: page URL, workflow name, field map, anything skipped and why

Systems beat hustle. Ship it clean. — Chosen
